

Super Lawn Trucks offer innovative safety features!

As the Risk Control Manager for W.S. Pharr, an Atlanta-based company that has specialized in the providing insurance to the landscape and nursery industry for the last 20 years, I am very familiar with the risks associated within the green industry. I know that the top losses for this industry are from stolen equipment and worker's compensation.

The Super Lawn Truck system offers unique ways to control some of these losses. Some of the innovative features on the Super Lawn Truck system are:

- **Unique tailgate ramp**: The only ramp offered on Landscape a truck that is fully hydraulic, so that means employees no longer have to raise and lower the ramp manually reducing lifting injuries. The ramp is also coated with an anti-skid epoxy that provides more slip resistance than the standard expanded metal decks.
- **Fully enclosed truck bodies**: The fully enclosed truck body allows a company to store their equipment overnight eliminating the need for daily loading/unloading which has attributed to over 30% of our customers workers compensation losses. The truck bodies also provide a secure place to store your equipment which helps eliminate any theft.
- **Debris Dumper**: This unique feature safely stores yard debris on the truck and will keep it from falling out during transport. It will also prevent any material from coming in contact with hot engines and causing damage to your equipment or truck.
- **Other Safety Features**: The Super Lawn Trucks System are equipped with an auxiliary fuel system for your equipment which eliminates the need to carry gas cans that either get stolen or spill during transport. The Super Lawn Trucks System also eliminates the need for any trailers which makes it easier for you to maneuver your vehicle reducing the chance of a costly accident.
